DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-45, drawn to a method of forming a solder bump, classified in class 438, subclass 411.
 - II. Claims 46-75, drawn to a solder bump structure, classified in class 257, subclass 737.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the solder bump structure of group II could be manufactured by a materially different process that could comprise forming a cover layer, patterning the cover layer to form a groove, making a metal bond pad inside the groove, depositing a metal cap layer over the metal bond pad and on the cover layer side walls; and depositing the solder bump over the cap layer.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
